SECTION 25: WIND ENERGY CONVERSION SYSTEMS (WECS)

This Ordinance is established to regulate the installation and operation of Wind Energy Conversion Systems (WECS) within Cottonwood County not otherwise subject to siting and oversight by the State of Minnesota pursuant to Minnesota Statutes, chapter 216F, Wind Energy Conversion Systems, as amended.

Subdivision 1. Definitions

Aggregated Project: Aggregated projects are those which are developed and operated in a coordinated fashion, but which have multiple entities separately owning one or more of the individual WECS within the larger project. Associated infrastructure such as power lines and transformers that service the facility may be owned by a separate entity but are also included as part of the aggregated project.

Cartway: A roadway established to connect an inaccessible parcel to a public road.

Commercial WECS: A WECS of equal to or greater than 100 kW in total name plate generating capacity.

Fall Zone: The area, defined as the furthest distance from the tower base, in which a guyed tower will collapse in the event of a structural failure. This area is less than the total height of the structure.

Feeder Line: Power lines that transport electrical power from one or more wind turbines to the point of interconnection with a high voltage transmission line.

High-voltage Transmission Line: A conductor of electric energy and associated facilities designed for and capable of operation at a nominal voltage of 100 kilovolts or more and is greater than 1,500 feet in length.

Meteorological Tower: For the purpose of this Wind Energy Conversion Systems Ordinance, meteorological towers are those towers which are erected primarily to measure wind speed and directions plus other data relevant to siting WECS. Meteorological towers do not include towers and equipment used by airports, the Minnesota Department of Transportation, or other similar applications to monitor weather conditions. The applicant shall specify if the tower is permanent or temporary.

Micro-WECS: Micro-WECS are WECS of 1 kW or less of nameplate generating capacity and utilizing supporting towers of 40 feet or less.

Non-Commercial WECS: A WECS of less than 100 kW in total name plate generating capacity.

Power Purchase Agreement: A legally enforceable agreement between two or more persons where one or more of the signatories agrees to provide electrical power and one or more of the signatories agrees to purchase the power.

Property Line: The boundary line of the area over which the entity applying for a WECS Permit has legal control for the purposes of installation of a WECS. This control may be attained through fee title
ownership, easement, or other appropriate contractual relationship between the project developer and a landowner.

**Public Conservation Land:** Land owned in fee title by State or Federal Agencies and managed specifically for [grassland] conservation purposes, including but not limited to State Wildlife Management Areas, State Parks, State Scientific and Natural Areas, Federal Wildlife Refuges, and Waterfowl Production Areas. For the purpose of this section Public Conservation Lands do not include private lands upon which conservation easements have been sold to public agencies or non-profit conservation organizations.

**Rotor Diameter:** The diameter of the circle described by the moving rotor blades.

**Sub-Stations:** Any electrical facility designed to convert electricity produced by wind turbines to a voltage for interconnection with transmission lines.

**Telecommunication Towers:** Any cables, wires, lines, wave guides, antennas, and any other equipment or facility associated with the transmission or reception of communications which a person seeks to locate or has installed upon or near a tower or antenna support structure. However the term telecommunication facilities shall not include:

1. Any satellite earth station antenna two meters in diameter or less which is located in an area zoned industrial or commercial.
2. Any satellite earth station antenna one meter or less in diameter, regardless of zoning category.

**Total Height:** The highest point above ground level reached by a rotor tip or any other part of the WECS.

**Tower:** Towers include vertical structures that support the electrical generator, rotor blades, or meteorological equipment.

**Tower Height:** The height of the WECS exclusive of the rotor blades.

**Waiver:** The intentional or voluntary written relinquishment of a landowner’s right under this ordinance, which waiver would negate the necessity of a Variance Hearing under the Zoning Ordinance. This agreement shall be properly signed and notarized on a form provided by the Office of the Zoning Administrator and would have the same effect as a decision of the Board of Adjustment.

**WECS – Wind Energy Conversion System:** A devise such as a wind charger, windmill, or wind turbine and associated facilities that convert wind energy to electric energy.

- Large wind energy conversion system or LWECS means any combination of WECS with a combined nameplate capacity of 5,000 kilowatts or more.
- Small Wind energy conversion system or SWECS means any combination of WECS with a combined nameplate capacity of less than 5,000 kilowatts.
Wetland: A Surface water feature classified as a Wetland in the United States Fish & Wildlife Circular No. 39 (1971 Edition), which is hereby incorporated by reference. This Circular is available through the Minnesota Inter-library loan system, and is not subject to frequent change.

Wind Turbine. A wind turbine is any piece of electrical generating equipment that converts the kinetic energy of blowing wind into electrical energy through the use of airfoils or similar devices to capture the wind.

Subdivision 2. Application Requirements

Land Use Permits, Conditional Use Permits, and Variances shall be applied for and reviewed under the procedures established in the Cottonwood County Zoning Ordinance. An application to the County for a Permit under this Section is not complete and will not be accepted by the County until a size determination is made pursuant to Minnesota Statutes, chapter 216F.001, as amended.

An application for all WECS shall include the following information:

1. The name(s) of the project applicant(s).
2. The name(s) of the project owner(s).
3. The mailing address for the project.
4. The legal description of the project.
5. A description of the project including: number of towers, type, name plate generating capacity, tower height, rotor diameter, and total height of all wind turbines, and means of interconnecting with the electrical grid.
6. Site layout, including the location of property lines, wind turbines, electrical wires, interconnection points with the electrical grid, and all related accessory structures along with distances and shall be drawn to scale.
7. Documentation of land ownership or legal control of the property.
8. The latitude and longitude of individual wind turbines.
9. The 911 addresses for each individual WECS in the project.
10. Evidence of a Power Purchase Agreement.
11. A USGS topographical map or a map with similar data of the property and surrounding area, including any other WECS within 10 rotor diameters of the proposed WECS.
12. A map showing location of wetlands, scenic, and natural areas including bluffs within 1,320 feet (1/4 mile) of the proposed WECS.
14. A map showing location of all known Telecommunication Towers within one (1) mile of the proposed WECS.

15. Additional information stated in Minnesota Rules, part 7836.0500 (subpart 1), as amended.

**Subdivision 3. Permitting Regulations by Zoning District.**

WECS will be permitted, conditionally permitted, or not permitted based on the generating capacity and land use district as established in the table below:

<table>
<thead>
<tr>
<th>District</th>
<th>Non-Commercial</th>
<th>Commercial</th>
<th>Meteorological Tower</th>
</tr>

<td>Other Existing WECS</td>
<td>N/A</td>
<td>To be determined based on: -Relative size of the existing and proposed WECS. -Alignment of the WECS relative to the predominant winds. -Topography. -Extent of wake interference Impacts on existing WECS. -Property line setback of Existing WECS. -Other setbacks required. Waived for internal setbacks in multiple turbine projects including aggregated project.</td>
<td>N/A</td>
</tr>
</tbody>
</table>

* The setback for dwellings shall be reciprocal in that no dwelling shall be constructed within 5 times the rotor diameter of a commercial wind turbine. OR: the distance agreed upon using the waiver procedure.

Setbacks – substations, accessory facilities, or other structures not located within a public right-of-way or any utility easement shall be set back at least sixty-five (65) feet from the right-of-way of any public road. Applicant is responsible for obtaining any necessary rights-of-way permits and road access permits.
Subdivision 6. Requirements and Standards.

1. Safety Design Standards.

   a. Engineering Certification. For all WECS, the manufacture’s engineer or another qualified engineer shall certify that the turbine, foundation and tower design of the WECS is within accepted professional standards, given local soil and climate conditions.

   b. Clearance. Rotor blades or airfoils must maintain at least 30 feet of clearance between their lowest point and the ground.

   c. Each individual Tower or WECS shall be clearly labeled and identified with the 911 address.

   d. Warnings.

      (1) For all Commercial WECS, a sign or signs shall be posted on the tower, transformer and substation warning of high voltage. Signs with emergency contact information shall also be posted on the turbine or at another suitable point.

      (2) For all guyed towers, visible and reflective objects, such as plastic sleeves, reflectors or tape, shall be placed on the guy wire anchor points and along the outer and innermost guy wires up to a height of 8 feet above the ground. Visible fencing shall be installed around anchor points of guy wires. Consideration shall be given to aviation warning painted on metrological towers of less than 200 feet.

2. Non-Commercial WECS shall have a total height of less than 200 feet.

3. Tower configuration.

   a. All wind turbines, which are part of a commercial WECS, shall be installed with a tubular, monopole type tower.

   b. Meteorological towers may be guyed.

   c. Color and Finish. All wind turbines and towers that are part of a commercial WECS shall be white, grey or another non-obtrusive color. Blades may be black in order to facilitate deicing. Finishes shall be matt or non-reflective.

   d. Lighting, including lighting intensity and frequency of strobe, shall adhere to but not exceed requirements established by Federal Aviation Administration permits and regulations. Red strobe lights are preferred for night-time illumination to reduce impacts on migrating birds.

   e. All signage on site shall comply with Section 11, Subdivision 2, page 37, of the Cottonwood County Zoning Ordinance. The name and/or logo of the manufacturer or the owner’s company name may be placed upon the nacelle, (compartment containing the electrical generator), of the WECS.
Subdivision 7. Noise

Noise is regulated by the Minnesota Pollution Control Agency under Chapter 7030. These rules establish the maximum night time noise and day time noise levels that effectively limit wind turbine noise to 50 bD(A) at farm residences.

Subdivision 8. Waste Management.

1. Solid Waste – Construction of wind power facilities, as with other facilities, will lead to the generation of various types of waste: packaging, equipment parts, litter, debris generated by site cleaning. Removal of such materials shall be accomplished in a timely manner. Similarly, ongoing operation and maintenance of these machines results in the generation of various waste products. This may include worn parts and packaging from new parts. All such materials shall be removed from the project site in a timely manner, and managed in an appropriate manner.

2. Hazardous Waste - Operation and maintenance of wind power facilities will result in the generation of some hazardous materials. This will primarily be used in the form of used lubricating materials. All such material shall be removed from the site immediately and managed in a manner consistent with all appropriate rules and regulations.

Subdivision 9. Interference

The applicant shall minimize or mitigate interference with electromagnetic communications, such as radio, telephone, microwaves, or television signals caused by any WECS. The applicant shall notify all telecommunication tower operators within one (1) mile of the proposed WECS location upon application to the county for permits. No WECS shall be constructed so as to interfere with County or Minnesota Department of Transportation microwave transmissions.

Subdivision 10. Avoidance and Mitigation of Damages to Public Infrastructure.

1. Roads. Applicants shall:
   a. Identify all county, city or township roads to be used for the purpose of transporting WECS, substation parts, materials, and/or equipment for construction, operation or maintenance of the WECS and obtain applicable weight and size permits from the impacted road authority(ies) prior to construction.
   b. Conduct a pre-construction survey, in coordination with the impacted local road authority(ies) to determine existing road conditions. The survey shall include photographs and a written agreement to document the condition of the public facility.
   c. Be responsible for restoring or paying damages as agreed to by the applicable road authority(ies) sufficient to restore the road(s) and bridge(s) to tower preconstruction conditions or according to preconstruction agreement.

2. Drainage System. The Applicant shall be responsible for immediate repair of damage to private and public drainage systems stemming from construction, operation or maintenance.
Subdivision 11. Other Applicable Standards

1. Electrical codes and standards. All WECS and accessory equipment and facilities shall comply with the National Electrical Code and other applicable standards.

2. All WECS shall comply with Federal Aviation Administration (FAA) standards and permits.

Subdivision 12. Discontinuation Regulations

1. A WECS shall be considered a discontinued use after 1 year without energy production, unless a plan is developed and submitted to the Office of the Cottonwood County Zoning Administrator outlining the steps and schedule for returning the WECS to service.

2. All WECS and accessory facilities shall be removed within one (1) year of the discontinuation of use.

3. Removal of all structures and debris to a depth of a minimum of 4 feet.

4. Restoration of soil and vegetation shall be consistent and compatible with surrounding vegetation.

5. FAA Lighting shall be maintained until the tower is removed.

Subdivision 14. Enforcement, Violations, Remedies, and Penalties

Enforcement of Section 25, Wind Energy Conversion Systems (WECS) shall be done in accordance with processes and procedures established in Cottonwood County and according to Minnesota State Statute.
